

Auto Drafting

# Automated Report Drafting

Go from approved data to a reviewed first draft in days instead of months.

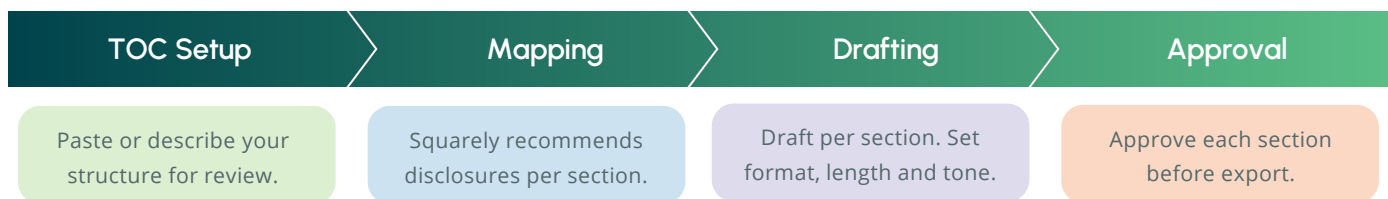

## WHAT IT IS

**Auto Drafting** is Squarely's automated report drafting module, designed to transform approved ESG data into a structured first report draft. Built around your report structure, it recommends relevant disclosures, generates section by section content, and supports review before export.

## HOW IT WORKS

**Four steps in one connected flow.**

## WHY YOU TRUST THE DRAFT

**Grounded, structured and reviewed.**

- 
**Grounded in approved data**  
 Drafting draws only on disclosures your team has approved.
- 
**Structure first**  
 The report structure leads the draft, with your data layer under every section.
- 
**Reviewed before export**  
 Each section requires approval before anything leaves the platform.
- 
**Yours to finish**  
 A working draft in your tone, ready for your edits.

**See it on your own reporting cycle**
