INTRODUCTION

SUSTAINABLE SQUARE IS A GLOBAL ADVISORY FIRM IN THE FIELD OF SUSTAINABILITY, CORPORATE SOCIAL RESPONSIBILITY (CSR) AND SOCIAL IMPACT, WITH HEADQUARTERS IN DUBAI.

Through our work across the Middle East and North Africa (MENA) region, we identified that one of the main challenges preventing the evolution of sustainability and Corporate Social Responsibility is a lack of comprehensive data regarding practices among organisations in the region. In meetings and conferences, data cited is usually taken from other countries or regions, such as the United States (US) and Europe, thus failing to provide insights relevant to the MENA region and ultimately preventing effective evaluation and efficient progress in this area.

This issue has been creating a skewed perception of sustainability across the Middle East and North Africa. We realise that it is important to recognise that the comprehension and integration of sustainability in organisations is unique to each country and region.

We decided to take action on this issue and create a comprehensive database in order for ourselves, organisations and governments across the region to better understand how sustainability and CSR are currently being managed.

Not only can the findings of our study be used by organisations to better assess and benchmark their own sustainability practices on a national and regional level, they can also be used by governments as a reference point to regulate sustainability performances in the private sector and identify where improvements need to be made.

In order to collect relevant data for evaluation, we launched a survey:

1500 organisations were targeted
638 organisations responded
18 different countries across the Middle East and North Africa.
THIS STUDY WOULDN'T HAVE BEEN POSSIBLE WITHOUT THE GENEROUS SUPPORT AND SPONSORSHIP OF

Emirates NBD
GLOSSARY

SUSTAINABILITY
The management of economic, social and environmental risks to ensure the long term sustainable growth of businesses. It is about applying conscientious, ethical and responsible practices within business operations and driving positive impact in the surrounding community.

CORPORATE SOCIAL RESPONSIBILITY (CSR)
The management of social risks and responsibilities of an organisation to ensure long-term sustainable growth. CSR in this study relates mostly to an organisation’s work within its local communities. We view CSR as a part of the overall sustainability of an organisation since it is mostly focused on the “social” aspect of sustainability.

GLOBAL REPORTING INITIATIVE (GRI)
GRI is the most widely adopted independent standards by organisations reporting on impact. It is an independent, international organisation that has pioneered sustainability reporting since 1997.
(Source: www.globalreporting.org)

UNITED NATIONS SUSTAINABLE DEVELOPMENT GOALS (UN SDGs)
The SDGs are the blueprint set by the UN calling for everybody from governments to individuals to work together to achieve a better and more sustainable future for all. They address the global challenges we face, including those related to poverty, inequality, climate, environmental degradation, prosperity, peace and justice.
(Source: www.un.org)

INTEGRATED REPORT (IR)
An Integrated Report is a concise overview of how an organisation’s strategy, governance, performance and prospects lead to the creation of value over short, medium and long-term periods. The IR framework was developed by the International Integrated Reporting Council (IIRC) in 1999.
(Source: www.integratedreporting.org)

UNITED NATIONS GLOBAL COMPACT (UNGC)
The UNGC is a framework for companies to align strategies, policies and operations with 10 principles on human rights, labour, environment and anti-corruption. The UNGC framework is aligned with the Sustainable Development Goals.
(Source: www.unglobalcompact.org)
METHODOLOGY
WE DEVELOPED OUR SURVEY QUESTIONS BASED ON OUR EXPERTISE IN THE FIELD OF SUSTAINABILITY AND CSR IN THE MIDDLE EAST AND NORTH AFRICA.

The questions were specifically targeted at increasing general understanding about the current status of sustainability and CSR practices among organisations in the region, identifying the drivers behind them and recognising future outlooks.

Even though Emirates NBD has extended support for this study, the bank has not taken part of the actual research process and has not influenced the findings in any way. The entire process from planning, execution and reporting has been conducted independently through Sustainable Square. Emirates NBD’s role was in providing sponsorship and presenting the findings.

The survey was conducted online and was available in both English and French. We sent it out to 1,500 organisations across 18 countries in the MENA region covering 16 sectors. Out of the 1,500 targeted organisations, 638 completed the entire survey. Therefore, our analysis is based on the 638 who answered all questions and finished the survey.

The average time it took to answer the survey was around 8 minutes. The nature of questions was mostly multiple choice, with an “other” option offered for almost every question, allowing respondents to give a more detailed response when the choices offered were not applicable to them. In order to maximise efficiency and accuracy, there were no open-ended questions.

You will notice that some questions have different number bases - meaning that not all questions are based on the answers from the original 638 organisations surveyed. This is because the survey had a cascading logic - meaning, depending on the answer a certain organisation chooses, it might get a different follow up question. So for example, organisations who have a holistic sustainability strategy will get different questions than those with an environmental strategy and so on.

1500 organisations

(BASED ON 638 RESPONDENTS)
SUSTAINABILITY INTEGRATION IN STRATEGIC PLANNING

SUSTAINABILITY-RELATED STRATEGIES:

The study found that, while the majority of participating organisations do not yet have a holistic sustainability strategy in place; there is a notable evolution towards more responsible and sustainable practices:

- 31% of organisations reported having a holistic sustainability strategy (which addresses sustainability topics across the entire organisation and in consideration of all stakeholders)
- 27% of organisations reported having a Corporate Social Responsibility (CSR) strategy (which focuses mostly on social topics and the local community)
- 6% of organisations reported having an environmental strategy
- 36% of organisations didn’t have any sustainability-related strategies in place
TOP DRIVERS FOR INVESTING IN SUSTAINABILITY:

When asked what drives organisations to invest in sustainability, the top two responses were:

- 21% to improve reputation
- 19% out of a sense of responsibility

SUSTAINABILITY DISCUSSIONS AT BOARD LEVEL:

- 68% of organisations said their Board of Directors discuss sustainability risks and opportunities in meetings

SUSTAINABILITY REPORTING AND DISCLOSURE:

- 75% of organisations with a holistic sustainability strategy produce annual sustainability reports. The practice of sustainability reporting is less common in organisations which only have a CSR strategy or an environmental strategy, rather than a holistic, all-encompassing sustainability strategy.
- 63% of organisations that reported having either a sustainability strategy or a CSR strategy in place were also aligning with at least one of the United Nations 17 Sustainable Development Goals.
- 56% of organisations in the region do some kind of annual reporting on their sustainability, social responsibility or environmental performance.
When asked about focus areas to support local communities, below were the most sighted areas:

**1. EDUCATION** was the top focus area, with 16% of participating organisations reporting it as their key focus area when it comes to supporting their local community.

**2. ENVIRONMENT** was in second, with 11% stating it at their key focus area.

**3. HEALTH AND YOUTH EMPOWERMENT** came in third, with 9% identifying these areas as their key focus.

*The question has been asked to companies with a sustainability or CSR strategy.*
CHALLENGES RELATED TO CLIMATE CHANGE MITIGATION:

On the right are top challenges that organisations face as they address topics impacting climate change:

- 21% said lack of awareness about climate-related risks is their main challenge.
- 20% said they face general difficulties integrating sustainable practices throughout their value chain, which in turn affects their ability to take action against climate change.
- 19% reported a lack of climate change data specific to their organisations as their key challenge.

EXISTING INITIATIVES TO MITIGATE CLIMATE CHANGE:

Below are initiatives being implemented to mitigate climate change:

- 79% of organisations reported initiatives related to managing energy use and GHG emissions across operations.
- 38% reported initiatives which engage customers on environmental practices.
- 34% reported initiatives to manage energy use and GHG emissions across supply chains.

*The question has been asked to companies with a sustainability or CSR strategy.
When asked about success factors that organisations would like to implement in the future in order to boost their sustainability practices, the top factors reported were:

- **26%** having an alignment between sustainability and business strategies
- **26%** having mechanisms to track sustainability
- **20%** possessing relevant sustainability knowledge
- **15%** more engagement in sustainability at the board level

The majority of participants see 2019 as a time to increase external communications regarding their sustainability practices. However, many predict that budgets for sustainability will not increase. The intention to increase external communications when it comes to sustainability aligns with the fact that organisations reported “reputational improvement” as one of the key drivers of their investment in sustainability.
STUDY FINDINGS
WHAT STRATEGIES ARE BEING ADOPTED?

Below, the percentage of respondents disclosing on the strategy adopted in their company.

- 36% do not have a strategy
- 31% has a holistic sustainability strategy
- 6% has an environmental strategy only
- 27% has a CSR strategy only

638 Companies
WHAT STRATEGIES ARE BEING ADOPTED?

The UAE currently has the most companies adopting holistic sustainability strategies, most often by companies in the Oil & Gas and Services industries.

Technology, Media and Telco companies are more focused on CSR strategies.

Few companies from our sample have only environmental strategies in place. Mainly, companies in the Construction, Materials, Industrial and Manufacturing industries fall under this category.

Healthcare, Retail, Personal/Household Goods, and companies in North Africa and Levant are behind in terms of adoption of holistic approaches for sustainability.
ORGANISATIONS WERE DIVIDED INTO THREE CATEGORIES: THOSE WITH A HOLISTIC SUSTAINABILITY STRATEGY, THOSE WITH ONLY A CSR STRATEGY AND THOSE WITH ONLY AN ENVIRONMENT STRATEGY. FOR EACH CATEGORY, WE ASKED 1) WHETHER THE STRATEGY IS DISCUSSED AT BOARD LEVEL; AND 2) WHAT THE TOP 5 DRIVERS TO INVEST IN SUSTAINABILITY ARE.

### HOLISTIC SUSTAINABILITY STRATEGY

CORPORATE SOCIAL RESPONSIBILITY PRIORITIES

**TOP RATED**

- **Education**: 16% of organisations surveyed rated Education as their most supported CSR topic.
- **Environmental Topics**: 11% of organisations placed Environmental Topics as their priority area.
- **Youth Empowerment**: 9% of organisations tied youth empowerment in third place.
- **Health**: 9% of organisations tied youth empowerment in third place.

**BOTTOM RATED**

- **Gender Equality**: 3% of organisations supported this area with most ratings coming from Tunisia.
- **Digital Society**: 3% of organisations supported this area with most ratings coming from Lebanon.
- **Religious Donations**: 2% of organisations supporting this area with most ratings coming from Saudi Arabia.
- **Child Labor**: 1% of organisations support this social issue.
Across several sectors, almost half of the organisations surveyed were not aligned with any of the 17 goals. (source: www.un.org)

The UAE has the most organisations taking a holistic approach to sustainability. It is also the country with the highest percentage of organisations currently in alignment with at least one of the SDGs. Organisations that do not have a sustainability project/team in place have been considered as not in alignment with the SDGs. Overall, more than half of the organisations surveyed are not aligned with any of the SDGs.
ENVIRONMENTAL STRATEGY CHALLENGES

TOP RATED

Lack of awareness of climate-related risks

21% of organisations reported this reason as the number one challenge in taking action against climate change.

Lack of relevant climate change data specific to our organisation

20% of organisations reported this reason as the second challenge in taking action against climate change.

Difficulties integrating sustainability into the value chain

20% of organisations who have a holistic sustainability strategy reported this reason as the number one challenge in taking action against climate change.

BOTTOM RATED

Weak regulatory incentives

19% of organisations, with only an environmental strategy in place, state weak regulatory incentives as a challenge.

Limited budget

13% of organisations state that limited budgets is a challenge to mitigate climate change.

Lack of commitment by management

6% of organisations chose lack of commitment from senior management as a challenge.

* Low base (under 30) – indicative results | **Countries with very low base not shown

Across all countries, the main challenges in implementing environmental strategies are related to a lack of awareness and relevant data that is applicable to the specific organisation. Budget is seen as a secondary issues for the majority of countries.
INITIATIVES TO ADDRESS CLIMATE CHANGE

Out of the 234 organisations that have an environmental and a holistic sustainability practice in place, the majority of actions are aimed at managing energy usage and GHG emissions in operations, mainly adopted by organisations in Construction and Industrial sectors. Utilities, Retail and Service organisations are more keen on engaging their customers on environmental practices. Personal Household Goods and Food & Beverage organisations invest more than others in managing energy use and GHG emissions in their supply chains. Oil & Gas and Chemical organisations are investing the most in renewable energy, while Chemical and Transport/Logistic organisations are focused on setting science-based targets for energy use and GHG emissions which they can monitor. For this question, respondents had the possibility to choose between 1 to 3 answers.
INITIATIVES TO ADDRESS CLIMATE CHANGE

34% of organisations with an environmental strategy choose to:

MANAGE ENERGY USE AND GHG EMISSIONS IN OPERATIONS

- Household Goods* 32%
- Food & Beverages 30%
- Automotive* 27%
- Oil & Gas 19%
- Industrial/Material/Manufacturing 19%

A Sustainability report is a report published by a company or organisation disclosing information on their economic, environmental and social impact performance.

A sustainability report also presents the opportunity for an organisation to express its values and governance model and demonstrate the link between its strategy and commitment to being part of a sustainable global economy. There are several reporting standards and frameworks:

Organisations producing an annual sustainability report

- 75% of organisations with a holistic sustainability strategy produce annual sustainability reports, while this is less common for organisations which only have a CSR strategy or an environmental strategy.

- 75% of organisations with a Holistic Sustainability Strategy produce an annual sustainability report.

- 38% of organisations with a CSR Strategy only produce an annual sustainability report.

- 34% of organisations with an Environmental Strategy only produce an annual sustainability report.
REPORTING STANDARDS USED FOR ANNUAL SUSTAINABILITY REPORTS

Within GCC countries, the GRI Standards are the most widespread. While, despite the lower sample, in The Levant, the UNGC Framework is mostly used.

**GCC (Base:110)**
- GRI Standards: 57%
- UNGC Framework: 30%
- No Standards: 9%
- Other: 3%

**North Africa (Base:65)**
- GRI Standards: 41%
- UNGC Framework: 30%
- No Standards: 3%
- Other: 10%

**The Levant (Base:10)**
- GRI Standards: 30%
- UNGC Framework: 50%
- No Standards: 10%
- Other: 10%

**HIGHER NUMBER OF PARTICIPANTS BY COUNTRY IN MENA:**

* Low base (under 30) – indicative results | **Industries with very low base not shown

Overall, the UAE ranks top in terms percentage of organisations annually reporting on sustainability. Oman and Kuwait follow. In North Africa, Morocco is the country with the highest percentage of companies producing an annual sustainability report.
DRIVING THE SUSTAINABILITY AGENDA

KEY FACTORS TO DRIVE PUBLIC TRUST AND ORGANISATIONAL SUCCESS

Respondents’ answers reflect that the key factors that drive organisational success and improve public trust are completely in alignment. Communicating and engaging with stakeholders was the top factor driving both of these points.

*The most important actions that you believe can improve public trust in your organisation (choose a maximum of 3).

**Drivers that have contributed the most to the success of your organisation today (choose a maximum of 3).
WHAT MAKES A SUSTAINABILITY STRATEGY SUCCESSFUL?

The results below were consistent across all industries, countries and organisations with different types of sustainability-related strategies. Tracking the performance is as crucial as aligning sustainability with the business direction.

Base: 525

- A mechanism to track sustainability performance: 26%
- Alignment between sustainability & business strategy: 26%
- Existence of sustainability knowledge & expertise: 20%
- Board-level engagement: 15%
- Employee engagement: 14%
FUTURE OUTLOOK

HOW RESPONDENTS PREDICT THEIR SUSTAINABILITY PRACTICES TO EVOLVE OVER THE NEXT 12 MONTHS

As we found out from previous answers, the main reason organisations are currently investing in sustainability is for reputational reasons. This is aligned with the main increase we see in this table, where most participants say their external sustainability communications will increase. There is an overall level of optimism in terms of the visibility of sustainability practices, both internally and externally. However, in terms of budget, respondents are less optimistic, with half of participants believing budgets will not increase.
